

Does your core system provide a complete view of information?

OnBase connects the data in your core systems to related content outside

You've invested in a core system to manage key data and operations — whether that's managing transactional data in an ERP system, information about customers in a CRM application or employee data in an HCM system.

But you have critical related content — from documents and forms to notes and emails — that these systems can't effectively manage. This leaves your employees without easy access to all the information required to make decisions, manage processes and provide customer service.

CORE SYSTEM

RELATED CONTENT

What if you could complete the picture?

OnBase complements your core business systems, providing employees with a complete view of the information they need, when and where they need it.

OnBase centralizes all types of critical content and connects it to the data in your core line-of-business systems, providing users with instant access to all relevant information directly from their familiar system interface.

OnBase displays the related content within the core system user interface

One platform **Unlimited potential**

OnBase
by Hyland

OnBase goes beyond linking content to your core systems by also managing the related **processes and data** – all on a single **enterprise information platform**.

1. Centralizes all content: Core systems that are designed to handle data often provide only a basic content repository with limited capabilities. OnBase delivers a full range of enterprise-class, secure document management capabilities on a single platform, seamlessly integrated with your core system.

2. Automates supporting processes: While your core system handles certain processes, there are other processes that are either very expensive to implement or that your system simply wasn't designed to handle. OnBase allows you to quickly and easily extend existing processes and create new ones.

3. Consolidates disconnected data: While your core systems manage specific business data, there are related tasks, activities, conversations and other information being managed outside these systems – via email inboxes, spreadsheets, antiquated databases and legacy applications. OnBase consolidates scattered data, tasks and activities living outside your core systems into a single location where they are connected and tracked.

OnBase provides these tools not only for a single business system but for multiple systems and applications across your enterprise.
